FOCALPOINT SHOPPING

General overview

Focalpoint Shopping provides a cryptic terminal emulation transaction (**FS**) to both leisure and corporate agencies to perform fare shopping from the Focalpoint window.

It revolutionises and merges the cumbersome manual comparison of tariff data and seat availability into a single request. Integrating this new workflow into business processes will save time and give faster access to lower fares. It increases efficiency and improves customer service.

Focalpoint Shopping now provides instant access to the wealth of Galileo 360° Fares and searches for low fare options and available flights using a fast and efficient cryptic transaction incorporating a wide variety of options to customise and streamline the search:

- Focalpoint Shopping is able to interrogate all public, private and net fare content housed within the Galileo 360° Fares database
- Up to 8 flight segments are handled by a single request
- Up to 9 passengers can be included in each transaction
- One-way, round-trip, circle trip, single and double open-jaw itineraries supported
- Low fare searches can be performed with or without booked itinerary
- Pricing and Availability modifiers can be used to influence the search process and provide customised results

Focalpoint Shopping returns many flight and price combinations. It is fast and easy to use. A multitude of modifiers allows the travel professional to refine the search in compliance with client expectation. This new tool will now allow travel consultants to respond to requests for complex travel itineraries more quickly and with ease.

Focalpoint Shopping with booked itinerary

FS

Introduction

Focalpoint Shopping provides the ability to search for alternative low fare options from an existing itinerary. When invoked from a booked itinerary, Focalpoint Shopping will identify the necessary origin, destination, travel dates and number of passengers from the Booking File and search for alternative airline or airline combinations applicable.

The following considerations should be noted when searching for low fares with a booked itinerary:

- ✓ The first response is always a Best Buy quote (**FQBB**) on the booked itinerary. However, it may not be the lowest fare as additional flight options may be less expensive.
- ✓ Since flight options that follow are in low-to-high order, it is possible that pricing option 1 (**the FQBB**) may also appear in a later pricing option as part of that fare grouping.
- ✓ The **FQBB** could fail because of a fare quote or a system issue. In this case, an error message will display in place of the best buy response, but the usual alternate pricing options may still be returned following the error and would be available to book.

Procedure

```

Explanations:

- ① This response displays 8 pricing options and 33 itinerary options.

Pricing options are returned in low-to-high fare order and may involve the same fare with several different itineraries. These itineraries are known as itinerary options within the pricing option group.
- ② Information that additional cost may apply (e.g. Credit Card payment charges)
- ③ The first pricing option is corresponding to a best buy quotation (**FQBB**)
- ④ This best buy quotation is the best available fare and is already booked
- ⑤ Itinerary detail of the best buy quotation
- ⑥ ***FS1** Enables you to display the fare details of the pricing option 1
FQN1 Enables you to display the fare rules of the pricing option 1
FSOF1 Enables you to display possible additional costs (e.g. Credit Card payment charges)
- ⑦ The second pricing option is the lowest available fare/itinerary found by the system
- ⑧ **FSK2** Enables you to rebook the passenger on the displayed itinerary
MORE*2 Enables you to display more itinerary options for pricing option 2
- ⑨ **FSMORE** Allows you to view additional screens of both pricing options and itinerary options, if applicable. Note: Search results are grouped in bundles of 8. If less than 8 results are returned, **FSMORE** input will not appear on the screen.

FS* Allows you to redisplay the results screen.
FS - Allows you to move back to the previous screen
- ⑩ **FSK** Enables you to rebook the desired pricing option (pricing option number must be appended)
***FS** Enables you to display the fare details of the desired pricing option (Pricing option number must be appended)
FQN Enables you to display the fare rules of the desired pricing option (Pricing option number must be appended)
FSOF Enables you to display possible additional costs (e.g. Credit Card payment charges) (pricing option number must be appended).
MORE* Enables you to display additional itinerary options for the desired pricing option (Pricing option number must be appended)

Point to Note

All these inputs may easily be activated with  and .

Format examples

As with booked itinerary requests, the shopping command is prefixed with the transaction code **FS**.

Basic entries:

Examples:

Input formats:	Descriptions:
FS	Standard pricing request
FSA	Standard pricing request regardless of availability

Description of pricing and availability modifier

Pricing modifiers are used in pricing the itinerary results returned to screen. **Availability modifiers** are user to influence the search performed to retrieve flights.

There are no limits on the number of pricing or availability modifiers that can be used in any single transaction. However, the maximum number of input characters allowed in any transaction is 256. This figure includes the 2 character **FS** prefix.

When used together, pricing modifiers must be specified **before** availability modifiers.

The following tables contain a full list of pricing and availability modifiers that are available for use with Focalpoint Shopping. Note that some modifier commands are new to Galileo.

Pricing modifiers

Any shopping request is preceded by the transaction code **FS**, then the appropriate modifiers are entered. Pricing modifiers must be specified before availability modifiers in the format and are preceded by 1 plus sign (+). Multiple pricing modifiers are separated by a / (slash).

Note: Should multiple booking classes be returned as a result of lower passenger type code (**PTC**) pricing – users will need to create separate booking files for each pricing solution returned in the classes.

Examples:

Pricing modifiers list	+
Descriptions	Examples
All ATPCO Passenger Types (*PTC)	FS+*PTC
Specific ATPCO Passenger Type Note: Up to 4 PTC's can be processed by a single request.	FS+*STU
Only this ATPCO Passenger Type (**PTC)	FS+**STU

Combining modifiers

You can combine pricing and availability modifiers to customise your search in order to meet the needs of your customer.

Remember that pricing modifiers precede any availability modifiers.

Examples:

Input formats:	Descriptions:
FS+P1++BA#	Pricing request: <ul style="list-style-type: none"> for only the person number indicated for flights only with the carrier indicated
FS+P1/S1.4++BA#	Pricing request: <ul style="list-style-type: none"> for only the person number indicated for only the segment numbers indicated for flights only with the carrier indicated
FS+P1++BA#/-BUSNS	Pricing request: <ul style="list-style-type: none"> for only the person number indicated for flights only with the carrier indicated for flights only in the cabin class indicated
FS+P1/S1.4++BA#/-BUSNS	Pricing request: <ul style="list-style-type: none"> for only the person number indicated for only the segment numbers indicated for flights only with the carrier indicated for flights only in the cabin class indicated
FS+.../.../...++.../.../...	Pricing request: <ul style="list-style-type: none"> FS = Focalpoint Shopping identifier + = Pricing modifier identifier ... = 1st pricing modifier / = mandatory slash ... = 2nd pricing modifier / = mandatory slash ... = 3rd pricing modifier, etc ++ = Availability modifier identifier ... = 1st availability modifier / = mandatory slash ... = 2nd availability modifier / = mandatory slash ... = 3rd availability modifier, etc

Shopping regardless of Availability

The modified shopping command of **FSA** can be used to bypass airlines availability and link statusing in order to return the lowest possible shopping solution. This is similar to current functionality offered by Fare Quote Best Buy-regardless to Availability (FQBA).

Focalpoint Shopping without booked itinerary

Introduction

Focalpoint Shopping will provide the option to search for low fare options from both **booked** and **unbooked** itineraries. This facility allows a user to input up to 8 city pairs or 8 segments. This type of search is most suited to the speculative leisure market, and will provide leisure agencies users with a powerful and flexible tool with which to provide maximum choice to the end customer.

Use of modifiers allows the user to customise the search parameters. Not all modifiers described in the previous pages are available for use with unbooked itinerary requests.

The following considerations should be noted when searching for low fares without a booked itinerary:

-  If a carrier code is not specified the default search will include 'YY' fares
-  If city codes (versus airport codes) are used the search will include both city and airport fares in the pricing process
-  A date input is required for each sector and that date option is maintained for each subsequent sector until another new date is entered
-  Each city pair is validated as a stopover unless the same date is entered for the next city pair, or a connection modifier is used
-  Modifiers can be used and are identified as segment or itinerary modifiers or both. If both segment and itinerary modifiers are identified, the itinerary level instruction takes priority. E.g.: FSBRU15JULROM/**SN**20JULBRU**++/LH** Addition of ++/LH as an itinerary level modifier overrides the segment level request for carrier SN preference between BRU and ROM
-  If both pricing and availability Modifiers apply to an entire request, the first pricing modifier is preceded by a single plus sign (+). If there are no pricing modifiers in the request then the first availability modifier is preceded by the double plus sign (++)

Procedure

The basic request consists of the transaction code of:

FSZRH10JANDXB20JANZRH++RMC0230	Pricing request restricting connection time to maximum 2 hours and 30 minutes
FSZRH10JANDXB20JANZRH++RMA	Pricing request restricting multi-airport connections

Combining modifiers are used in the same manner as with Focalpoint Shopping from Booking File (see page 15):

Example:

Input format:	Description:
FSZRH10JANDXB20JANZRH+:NR++LX#	Pricing Request: <ul style="list-style-type: none"> only for fares without restrictions only for flights with the carrier indicated

Shopping regardless of Availability

The modified shopping command of **FSA** can be used to bypass airlines availability and link statusing in order to return the lowest possible shopping solution. This is similar to current functionality offered by Fare Quote Best Buy-regardless to Availability (**FQBA**).
